SUMMARY

Data Scientist with over 6 years of experience, specializing in machine learning. Graduated in Computer Science from the University of Brasília (UnB) and currently pursuing a master's degree at the same institution. I have a solid background in consulting and back-end development, applying innovative solutions to complex problems. My experience includes implementing robust Data Science solutions, encompassing analysis, visualization, predictive modeling, and decision automation. Passionate about artificial intelligence, I have published articles in the field, focusing on the use of deep learning applied to healthcare. Always seeking new challenges and ready to collaborate on creative and critical projects.

HARD SKILLS		SOFT SKILLS	
• Python	• REST APIs	• Communication	• Leadership
• R; C++; Ruby; Node	• MySQL; MongoDB; Postgresql	• Problem Solving	• Teamwork
• AWS; Azure	• Spark; Hadoop	• Critical Thinking	• Time Management
• SAS Applications	• Databricks; Docker	• Creativity	• Organizational Skills

PROFESSIONAL EXPERIENCE

Senior Data Scientist (GMW Consultoria)

July 2022 – Present

- Worked for over 2 years at Santander, structuring decision flows and data pipelines with SAS, Python, and Databricks. Led the implementation of LLMs for document interpretation and automated rule generation, accelerating deliveries and facilitating smooth transitions between tools.
- Worked for over 1 year at Bradesco on the development of a predictive AI model to anticipate operational failures in ATMs. Utilized Big Data tools such as Hadoop and Spark to process and analyze massive volumes of logs in Data Lakes, extracting behavioral patterns that grounded the model's maintenance predictions.
- Strategically participated in analytical development projects for major corporations including Ambev, Vivo, Oi, and Vale.
- Designed SAS solutions for data analysis, predictive modeling, decision automation, and data visualization using tools like SAS Studio, Decision Manager, and Visual Analytics.
- Developed solutions in Python, Java, Ruby, and SQL for task automation and system integration.
- Implemented and managed cloud solutions on Azure, ensuring scalability and availability.
- Administered PostgreSQL databases, modeling data, optimizing queries, and ensuring data integrity.
- Built REST APIs in Python with Flask for system integration, efficiently exposing data and functionalities.
- Delivered training sessions on the analytical data lifecycle, covering collection, exploration, deployment, and orchestration.

Back-end Developer Intern (4 Hábitos)

May 2021 - Jul 2022

- Implemented cloud solutions using Azure and AWS, provisioning resources, configuring services, and ensuring application scalability and availability.
- Developed interactive dashboards in Power BI, integrating data from multiple sources to create clear and intuitive visualizations, facilitating strategic decision-making.
- Developed AI models in Python and Azure, applying deep learning techniques for object classification in images.
- Administered NoSQL databases like MongoDB and CosmosDB, ensuring high availability, scalability, and performance, along with data modeling and query optimization.
- Utilized Python for Web Scraping to automate data collection and extraction of relevant information for analysis.
- Developed GraphQL APIs in Ruby and Node.js, providing a flexible and efficient interface for client-server communication.

Back-end Developer Intern (Filterfeed)	Mar 2020 - May 2021
- Applied NLP techniques in Python for sentiment analysis, information extraction, and text classification using libraries like NLTK and spaCy. - Manipulated and analyzed data using Python, performing data cleaning, transformation, and visualization to generate insights and support decision-making. - Managed MySQL databases with a focus on data modeling, query performance, and information security. - Developed REST APIs in Python with Django for system integration, exposing data and functionalities following best development and security practices. - Developed chatbots in Python and MySQL, using NLP techniques to filter important information, enhancing user experience with the data. - Implemented Docker/Docker Compose environments to facilitate application distribution and execution, ensuring portability and consistency across different environments.	

EDUCATIONAL QUALIFICATIONS

Master's degree in Computer Systems	Mar 2025 - Dec 2026
<i>University of Brasília (UnB), DF, Brazil</i>	
Bachelor Degree in Computer Science	Jul 2019 - Dec 2024
<i>University of Brasília (UnB), DF, Brazil</i>	
Technical Degree in Informatics	Jan 2017 – Dec 2018
<i>Technical School of Ceilândia (ETC), DF, Brazil</i>	

PUBLICATIONS

- Rodrigues, A. V. M., & Oliveira, R. B. (2024). "Segmentation of skin lesions and their attributes in dermatoscopic images based on convolutional neural networks". Published in the <i>Revista de Informática Teórica e Aplicada (RITA)</i> and presented at the <i>XIX Workshop on Computer Vision (WVC)</i>. - Rodrigues, A. V. M., & Oliveira, R. B. (2023). "A Comparison of Mask R-CNN and U-Net for Melanoma Attribute Segmentation". Presented at the 29th Scientific Initiation Congress of UnB and the 20th Scientific Initiation Congress of DF. Awarded Honorable Mention. - Rodrigues, A. V. M., & Oliveira, R. B. (2022). "Uma U-net Melhorada para Segmentação de Câncer de Pele em Imagens Dermatoscópicas". Presented at the 28th Scientific Initiation Congress of UnB and the 19th Scientific Initiation Congress of DF.
